DETAILED ACTION

Allowable Subject Matter

1. Claims 22, 23, 25, 30, 31, and 35-43 are allowed.
2. The following is an examiner's statement of reasons for allowance:

With regard to independent claim 22, the prior art made of record fails to teach or suggest a fixing plate having an opening therein arranged so as to divide an interior of a plating tank into an anode compartment accommodating the anode and a workpiece compartment accommodating the workpiece and a ring shaped nozzle pipe being fixed to the fixing plate. There was not found a teaching in the prior art suggesting modification of the conventional electroplating apparatus in order to obtain the features of the present invention.

With regard to independent claim 35, the prior art made of record fails to teach wherein stirring vanes extend vertically within the plating tank, the vanes having respective tip ends which are aligned with each other in such a way that the distance between the stirring surfaces of the stirring vanes and the substrate are equal. There was not found a teaching in the prior art suggesting modification of the conventional electroplating apparatus in order to obtain the features of the present invention.

With regard to independent claim 38, the claimed invention requires a plating apparatus comprising a plating tank for holding a plating solution, a stirring mechanism having a stirring vane for immersing in the plating solution and facing the workpiece surface, the stirring vane being mounted on a rotational shaft and reciprocally moveable parallel to the surface of the workpiece wherein the vane is oriented such that a plane of

the stirring vane forms an angle, and varies the angle with respect to a plane perpendicular to the surface of the workpiece, as the stirring vane reciprocally moves by angular movement of the rotational shaft about the longitudinal axis of the rotational shaft.

The closest Prior Art discloses a plating apparatus comprising a plating tank for holding a plating solution; and a stirring mechanism having a stirring vane immersed in the plating solution in the plating tank wherein the stirring vane comprises a plurality of stirring vanes and disposed in a position facing a surface to be plated of a work piece the stirring vane being reciprocally movable parallel to the surface to be plated of the workpiece to stir the plating solution; wherein the stirring vane is operable to form an angle with respect to the surface the work piece which is variable as the stirring vane reciprocally moves but fails to teach wherein such stirring vane forms an angle with respect to a plane perpendicular to the surface of the workpiece and wherein such angle varies by an angular movement of the rotational shaft about the longitudinal axis of the rotational shaft. There was no teaching in the Prior Art suggesting modification of the conventional apparatus to obtain the stirring mechanism of the present invention.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Drawings

4. Figures 27-30 were previously objected to due to informalities. In particular, such figures required a "Prior Art" designation. In view of Applicant's submission of new drawings, the previous objection has been withdrawn.

Claim Objections

5. Claim 25 was objected to because its dependency required modification in view of previous cancellation of dependent claim 24. The applicant amended claim 25 in order to change its dependency to claim 22. Therefore, the previous objection has been withdrawn.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ZULMARIAM MENDEZ whose telephone number is (571)272-9805. The examiner can normally be reached on Tuesday-Friday from 9am to 7pm.
